Vegetable production remains a tremendous industry for Florida in terms of acreage and value. Including vegetables, melons, potatoes, and strawberry, production occurred on approximately 251,011 acres and generated more than $1.34 billion in gross sales in 2016, which ranks second among all the states. Growing seasons are well defined by the peninsula geography, allowing Florida to serve as the main vegetable supplier during late fall, winter, and early spring months to the U.S. Although more than 40 vegetable crops are commercially-planted in the state, Florida ranks in the top three on production value of tomato, bell pepper, snap bean, squash, sweet corn, watermelon, cabbage, cucumber, and strawberry (Table 1.1).

Table 1.1. Vegetable production acreage and value in Florida.

Source: Vegetables-2015-2016 summary, NASS, USDA.

The objective of this publication is to provide updated information on crop cultivars, pesticide labels, and certain practices for vegetable production in Florida. Suggested practices are guidelines for growers to plan farm activities and are always subjected to review using the latest scientific data available.

Web Links to Additional Information on Vegetable Production Topics

University of Florida IFAS Extension provides information through the Electronic Data Information Source (EDIS) found at edis.ifas.ufl.edu. Below is a partial list of EDIS pertaining to vegetable production for further information beyond the Vegetable Production Handbook of Florida. The boxes on the left are QR codes that can be scanned with a mobile device and a QR scanning app will direct you to the listed website.
