Common Freshwater Fish Parasites Pictorial Guide: Sessile Ciliates

Deborah B. Poudre, Eric W. Curtis, and Roy P. E. Yanong

Introduction
This publication is one in a series of pictorial guides that is designed to assist in the identification of common freshwater fish parasites. The publications included in this series are:

- Common Freshwater Fish Parasites Pictorial Guide: Sessile Ciliates
- Common Freshwater Fish Parasites Pictorial Guide: Motile Ciliates
- Common Freshwater Fish Parasites Pictorial Guide: Dinoflagellates, Coccidia, Microsporidians, & Myxozoans
- Common Freshwater Fish Parasites Pictorial Guide: Monogeneans
- Common Freshwater Fish Parasites Pictorial Guide: Digenean Trematodes
- Common Freshwater Fish Parasites Pictorial Guide: Nematodes
- Common Freshwater Fish Parasites Pictorial Guide: Acanthocephalans, Cestodes, Leeches, & Pentastomes
- Common Freshwater Fish Parasites Pictorial Guide: Crustaceans

The information provided in this guide is not intended to be a complete, detailed description of each parasite or parasite group and its characteristics but rather is intended to assist in the visual identification of some of the most common species or groups of parasites seen in freshwater fish. For further information on each parasite, refer to publications in the “Recommended Reading” and “Reference” sections below.

Guide Information
- Target Tissue: provides the location on/in the fish where the parasite is most commonly found.
- Characteristic: provides a brief description about the appearance of the parasite.
- Size: provides the size or size range of the parasite. (1 µm = 0.001 mm = 0.0001 cm) (µm = micron or micrometer; mm = millimeter; cm = centimeter)
- Movement: provides the type of movement, if any, of the parasite.
- Note: provides a brief comment of interest about the parasite.

Acknowledgements
The authors thank Lester Khoo and Greg Vermeer for the photographs they contributed to this publication.

Common Freshwater Fish Parasites Pictorial Guide:

Sessile Ciliates
Deborah B. Pouder, Eric W. Curtis, Roy P. E. Yanong

**Ambiprya**
(Formerly Scyphidia)

**Target Tissues:** Skin, fin, gills
**Appearance:** Barrel-shaped with row of oral and mid-line cilia
**Size:** Approx. 50–95 μm x 40–61 μm
**Movement:** Not free-moving on fish; may see cilia move
**Note:** Common in water with high organic concentration

**Apiosoma**
(Formerly Glossatella)

**Target Tissues:** Skin, fin, gills
**Appearance:** Vase-shaped with oral cilia
**Size:** Approx. 100 μm in length
**Movement:** Not free-moving on fish; may see cilia move
**Note:** Common in water with high organic concentration

**Capriniana**
(Formerly Trichophrya)

**Target Tissues:** Gills
**Appearance:** Amorphous shape with cilia which stick up like pins in pin cushion
**Size:** Approx. 40–110 μm x 25–70 μm
**Movement:** Not free-moving on fish
**Note:** Common in water with high organic concentration

**Epistylis**

**Target Tissues:** Skin, fin, (less commonly) gills
**Appearance:** Elongated on stalks; forms colonies
**Size:** Zooids approx. 40–80 μm x 20–30 μm; stalks up to 1.2 mm in length
**Movement:** Not free-moving on fish; may see cilia move
**Note:** Common in water with high organic concentration; often found in combination with the bacteria *Aeromonas* sp.
