Introduction

This publication is one in a series of pictorial guides that is designed to assist in the identification of common freshwater fish parasites. The publications included in this series are:

- Common Freshwater Fish Parasites Pictorial Guide: Sessile Ciliates
- Common Freshwater Fish Parasites Pictorial Guide: Motile Ciliates
- Common Freshwater Fish Parasites Pictorial Guide: Flagellates
- Common Freshwater Fish Parasites Pictorial Guide: Dinoflagellates, Coccidia, Microsporidians, & Myxozoans
- Common Freshwater Fish Parasites Pictorial Guide: Monogeneans
- Common Freshwater Fish Parasites Pictorial Guide: Digenean Trematodes
- Common Freshwater Fish Parasites Pictorial Guide: Nematodes
- Common Freshwater Fish Parasites Pictorial Guide: Acanthocephalans, Cestodes, Leeches, & Pentastomes
- Common Freshwater Fish Parasites Pictorial Guide: Crustaceans

The information provided in this guide is not intended to be a complete, detailed description of each parasite or parasite group and its characteristics but rather is intended to assist in the visual identification of some of the most common species or groups of parasites seen in freshwater fish. For further information on each parasite, refer to publications in the “Recommended Reading” and “Reference” sections below.

Guide Information

The following information is provided for each parasite on the guide.

- Target Tissue: provides the location on/in the fish where the parasite is most commonly found.
- Characteristic: provides a brief description about the appearance of the parasite.
- Size: provides the size or size range of the parasite. (1 µm = 0.001 mm = 0.0001 cm) (µm = micron or micrometer; mm = millimeter; cm = centimeter)
- Movement: provides the type of movement, if any, of the parasite.
- Note: provides a brief comment of interest about the parasite.
Acknowledgements
The authors thank Greg Vermeer for the photograph he contributed to this publication.

Common Freshwater Fish Parasites Pictorial Guide:

Motile Ciliates

Deborah B. Pouder, Eric W. Curtis, and Roy P. E. Yanong

**Chilodonella**

- **Target Tissues:** Skin, fin, gills
- **Appearance:** Ovoid or kidney-shaped with bands of cilia along the long axis; dorsoventrally flattened; appears translucent
- **Size:** Approx. 30–80 μm x 20–60 μm
- **Movement:** Free-moving
- **Note:** Often causes fish to excrete excessive mucus

**Ichthyophthirius multifiliis**

- **Target Tissues:** Skin, fin, gills
- **Appearance:** Amoeboid; C-shaped nucleus seen in “adults” only
- **Size:** Trophont approx. 50 μm–1 mm; theront approx. 30 μm x 50 μm
- **Movement:** Free-moving; rolling, amoeboid motion
- **Note:** Life cycle includes stages on and off fish

**Tetrahymena**

- **Target Tissues:** Skin, fin, gills, eyes, internal organs
- **Appearance:** Ovoid with evenly distributed cilia
- **Size:** Approx. 55 μm x 30 μm
- **Movement:** Free-moving
- **Note:** Commonly found on dead fish or detritus or in water with high organic concentration

**Trichodina**

- **Target Tissues:** Skin, fin, gills
- **Appearance:** “Flying saucer” or “scrubbing bubbles” shape
- **Size:** Approx. 35–135 μm in diameter
- **Movement:** Free-moving; whirling motion
- **Note:** Common in water with high organic concentration
