Facts about Vitamin D

Linda B. Bobroff and Isabel Valentín-Oquendo

Why do we need vitamin D?
Vitamin D is needed for normal absorption of calcium and phosphorus. It helps put these minerals into bones and teeth. This makes bones stronger and reduces risk for bone fractures. Vitamin D also helps keep the immune system functioning normally, so our bodies can resist some types of disease.

What happens if we don’t get enough vitamin D?
Lack of vitamin D affects bones and many other parts of the body. Growing children who do not get enough vitamin D may have bones that are too soft and are unable to support their weight (rickets). Adults deficient in vitamin D can also develop soft bones (osteomalacia), and they can lose bone mass, which leads to fragile bones (osteoporosis).

How much vitamin D do we need?
We need to get enough vitamin D from all sources to have adequate levels of it in our blood. Recent research indicates that Americans need to get more vitamin D than we used to think was needed. Older adults and persons with dark skin are at a higher risk than others for having low levels of vitamin D in their bodies.

Current intake recommendations from the Recommended Dietary Allowances (RDA) for vitamin D are given in the table below.

Table 1. Intake Recommendations for Vitamin D

<table>
<thead>
<tr>
<th>Life Stage</th>
<th>Vitamin D (IU/day)</th>
<th>Vitamin D (mcg/day)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Children and Teens</td>
<td>600</td>
<td>15</td>
</tr>
<tr>
<td>Adults, up to age 70</td>
<td>600</td>
<td>15</td>
</tr>
<tr>
<td>Adults, ages 71+</td>
<td>800</td>
<td>20</td>
</tr>
<tr>
<td>Pregnant</td>
<td>600</td>
<td>15</td>
</tr>
<tr>
<td>Breastfeeding</td>
<td>600</td>
<td>15</td>
</tr>
</tbody>
</table>

On food and supplement labels, the amount of vitamin D may be given in International Units (IU) or micrograms (mcg). Since skin synthesis of vitamin D varies so much, the latest dietary recommendations assume minimal sun exposure.
How can we get enough vitamin D?
We get vitamin D from three sources—food, supplements, and sunlight.

Food
Eggs, sardines, and salmon contain vitamin D. Most fluid milk and some brands of yogurt are fortified with vitamin D as well. Fortified breakfast cereals, breads, and orange juice may also contain vitamin D. Here are some foods and the amount of vitamin D they typically contain:

Table 2. Typical Vitamin D Content in Food

<table>
<thead>
<tr>
<th>Food</th>
<th>Vitamin D in IU (mcg)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salmon, cooked, 3 oz.</td>
<td>320 (8)</td>
</tr>
<tr>
<td>Sardines, canned in oil, 3 oz.</td>
<td>240 (6)</td>
</tr>
<tr>
<td>Milk, fortified, 1 cup</td>
<td>100 (2.5)</td>
</tr>
<tr>
<td>Shrimp, canned, 3 oz.</td>
<td>90 (2.3)</td>
</tr>
<tr>
<td>Fortified orange juice, 3/4 cup</td>
<td>75 (1.9)</td>
</tr>
<tr>
<td>Cereal, fortified, 1 serving</td>
<td>40 (1) or more</td>
</tr>
<tr>
<td>Egg yolk, cooked, 1 large</td>
<td>25 (0.6)</td>
</tr>
</tbody>
</table>

oz. = ounces
IU = International Units
mcg = micrograms

Supplements
If you can’t get enough vitamin D from your diet and you don’t get out in the sun much, a supplement can help. It is recommended that older adults and persons with dark skin get extra vitamin D from fortified foods or supplements.

Sunlight
When exposed to sunlight, the skin makes vitamin D, which is then activated in the body. Most people get some vitamin D from sunlight. However, several factors affect how well the body makes vitamin D after the skin is exposed to sunlight. For example, people in the northern United States may make less vitamin D than those in the south, especially in the winter when the sun is lower in the sky. In general, the following people may be at risk for vitamin D deficiency:

- Older people
- Persons with dark skin
- People who are obese or have kidney or liver disease
- People who do not get enough direct sun exposure

How much is too much?
Vitamin D toxicity can cause nausea, mood changes, and organ damage. The latest recommendation is to get no more than 4,000 IU (less for children younger than nine) of vitamin D each day from food and supplements. (See first website below.) Sun exposure will not cause vitamin D toxicity.

Where can I get more information?
The Family and Consumer Sciences (FCS) agent at your county Extension office may have written information and nutrition classes for you to attend. In Florida, find your local Extension office at http://solutionsforyourlife.ufl.edu/map. Also, a physician or registered dietitian (RD) can provide reliable information.

Reliable nutrition information may be found on the Internet at these sites:

Centers for Disease Control and Prevention
http://www.cdc.gov/nutrition/everyone/basics/vitamins/index.html

Institute of Medicine

National Institute of Health
