

Fall Prevention: Who's at Risk?¹

Sergio Romero²

There are many risk factors associated with falls. Some risks are environmental, like poor lighting. Others relate to diseases people have or medications they take. It's important to know if you are at high risk of falling. Take this quiz to see if you are at risk! For each question, circle "yes" or "no."

Do you take more than two medications daily?	Yes / No
Have you or those around you noticed a change in your hearing?	Yes / No
Do you wear glasses or have any vision problems?	Yes / No
Have you fallen in the past year?	Yes / No
Do you have one or more of the following: Parkinson's disease, stroke, high blood pressure, urinary incontinence, osteoporosis, multiple sclerosis, or another neuromuscular disease?	Yes / No
Do you get dizzy when you get up, change position, or walk?	Yes / No
Do you have trouble picking up objects from the floor, reaching overhead, getting in and out of a chair, or walking without holding on to something?	Yes / No
Do you have throw rugs, stairs without rails, uneven surfaces, slippery floors, or cluttered walkways in your house?	Yes / No
Are you fearful of falling?	Yes / No
Do you wear shoes with high heels or slippery soles?	Yes / No
Do you have poor lighting conditions in your house?	Yes / No

If you answered "yes" to any of the questions, you may be at high risk for falling. Ask your doctor or health care provider about modifications and actions you can take to lower your risk of falling.
