

Cupressus sempervirens 'Glauca': 'Glauca' Italian Cypress¹

Edward F. Gilman and Dennis G. Watson²

Introduction

With its narrow columnar habit of growth, this evergreen forms tall, dark green columns 25 to 40 feet in height but are often shorter in the east. 'Glauca' has blue-green foliage and tight columnar form. Trees are normally no more than 3 feet wide. The scale-like leaves lend a very fine texture to any setting. Planted three feet apart, they make a dense screen. Italian cypress is often used for framing, as a strong accent around large buildings, or in the formal landscape but does not lend itself well to many home landscapes. It quickly grows much too tall for most residential landscapes, looking much like a green telephone pole.

General Information

Scientific name: *Cupressus sempervirens*

Pronunciation: koo-PRESS-us sem-per-VYE-renz

Common name(s): 'Glauca' Italian cypress

Family: *Cupressaceae*

USDA hardiness zones: 7B through 11 (Fig. 2)

Origin: not native to North America

Invasive potential: little invasive potential

Uses: screen

Availability: somewhat available, may have to go out of the region to find the tree

Figure 1. Middle-aged *Cupressus sempervirens* 'Glauca': 'Glauca' Italian Cypress

Description

Height: 25 to 40 feet

Spread: 3 to 6 feet

Crown uniformity: symmetrical

Crown shape: columnar

Crown density: dense

Growth rate: moderate

1. This document is ENH385, one of a series of the Environmental Horticulture Department, UF/IFAS Extension. Original publication date November 1993. Reviewed May 2014. Visit the EDIS website at <http://edis.ifas.ufl.edu>.

2. Edward F. Gilman, professor, Environmental Horticulture Department; Dennis G. Watson, former associate professor, Agricultural Engineering Department, UF/IFAS Extension, Gainesville FL 32611.

Texture: fine

Figure 2. Range

Foliage

Leaf arrangement: whorled

Leaf type: simple

Leaf margin: entire

Leaf shape: scale-like

Leaf venation: none, or difficult to see

Leaf type and persistence: evergreen

Leaf blade length: less than 2 inches

Leaf color: green, blue or blue-green

Fall color: no color change

Fall characteristic: not showy

Flower

Flower color: unknown

Flower characteristics: not showy

Fruit

Fruit shape: oval

Fruit length: .5 to 1 inch

Fruit covering: dry or hard

Fruit color: brown

Fruit characteristics: does not attract wildlife; not showy; fruit/leaves not a litter problem

Trunk and Branches

Trunk/bark/branches: branches don't droop; not showy; typically one trunk; thorns

Pruning requirement: little required

Breakage: resistant

Current year twig color: brown, gray

Current year twig thickness: thin

Wood specific gravity: unknown

Culture

Light requirement: full sun

Soil tolerances: sand; loam; clay; acidic; alkaline; well-drained

Drought tolerance: high

Aerosol salt tolerance: moderate

Other

Roots: not a problem

Winter interest: no

Outstanding tree: no

Ozone sensitivity: unknown

Verticillium wilt susceptibility: resistant

Pest resistance: sensitive to pests/diseases

Use and Management

Growing in full sun on various well-drained soils, Italian cypress should be planted in a well-prepared site and watered periodically until well-established. Italian cypress should not be pruned. It is very susceptible to mites and trees are often infested.

Many cultivars are available: 'Stricta'—very popular; 'Horizontalis'—horizontally-spreading branches.

Propagation is by cuttings or layering.

Pests

Bagworms are occasionally a problem for Italian cypress. Mites are often a problem.

Diseases

Root rot can be a problem for Italian cypress in poorly-drained soil. Canker has killed many trees in California.
