

Yucca elephantipes 'Variegata': Variegated Spineless Yucca¹

Edward F. Gilman and Dennis G. Watson²

Introduction

A dramatic landscape element, Spineless Yucca is the tallest of the Yuccas, reaching 30 feet in height with a 15-foot spread, its single, thick, rough trunk topped with straplike, four-foot-long leaves. Variegated Spineless Yucca differs from the species only in the variegated, stripped leaf pattern. The trunk can grow to four-foot-thick. Sprouts often grow from the base of the trunk forming a multi-trunked tree. Spineless Yucca grows fairly rapidly but usually stays under 20 feet in height, and is ideal for use in succulent gardens or large planters. Unlike its close relative, Spanish Bayonet, Spineless Yucca can be used in close range of people since it lacks the formidable, terminal spine and has harmless leaves. It was introduced into Florida in 1956 as a substitute for the spiny Spanish Bayonet.

General Information

Scientific name: *Yucca elephantipes*

Pronunciation: YUCK-uh ell-uh-fan-TYE-peeZ

Common name(s): Variegated Spineless Yucca, Variegated Soft-Tip Yucca

Family: *Agavaceae*

USDA hardiness zones: 9B through 11 (Fig. 2)

Origin: not native to North America

Invasive potential: little invasive potential

Uses: indoors; deck or patio; specimen; container or planter; highway median

Figure 1. Middle-aged *Yucca elephantipes* 'Variegata': Variegated Spineless Yucca

Availability: somewhat available, may have to go out of the region to find the tree

Description

Height: 20 to 30 feet

Spread: 10 to 15 feet

Figure 2. Range

Crown uniformity: irregular

Crown shape: upright/erect

Crown density: open

Growth rate: fast

Texture: coarse

Foliage

Leaf arrangement: alternate (Fig. 3)

Leaf type: simple

Leaf margin: entire

Leaf shape: lanceolate, linear

Leaf venation: parallel

Leaf type and persistence: evergreen

Leaf blade length: more than 36 inches

Leaf color: variegated

Fall color: no color change

Fall characteristic: not showy

Flower

Flower color: white/cream/gray

Flower characteristics: showy

Fruit

Fruit shape: oval

Fruit length: .5 to 1 inch

Fruit covering: fleshy

Fruit color: brown

Fruit characteristics: does not attract wildlife; not showy; fruit/leaves not a litter problem

Trunk and Branches

Trunk/bark/branches: branches don't droop; showy; typically multi-trunked; thorns

Pruning requirement: needed for strong structure

Breakage: resistant

Current year twig color: green

Current year twig thickness: very thick

Wood specific gravity: unknown

Culture

Light requirement: full sun, partial sun or partial shade

Soil tolerances: clay; sand; loam; alkaline; acidic; well-drained

Drought tolerance: high

Aerosol salt tolerance: moderate

Other

Roots: not a problem

Winter interest: no

Outstanding tree: no

Ozone sensitivity: unknown

Verticillium wilt susceptibility: unknown

Pest resistance: resistant to pests/diseases

Figure 3. Foliage

Use and Management

The two to three-foot-tall bloom is produced on top of the stalks once the plant is 8 to 10 feet tall. Blooms are edible and high in calcium and potassium and can be used in salads. Leaves contain large amounts of ascorbic acid.

Spineless Yucca grows easily in full sun or partial shade on any well-drained soil. Do not plant Yucca unless drainage is superior. Yucca grows well as a houseplant in a well-lighted area.

Propagation is by cuttings of any size. Suckers at the base of the plant root quite easily.

Pests

Pests include Yucca moth borers, scale, and black weevil which bore into roots and stems.

Diseases

No diseases are of major concern, except root rot in soils kept too moist. Do not irrigate Yucca. Leaf spots sometimes infect Yucca but do no real harm to the plant.
