**Introduction**
This charming Florida native will delight everyone with beautiful orange-red flowers throughout most of the year (Fig. 1). Firebush is a large, soft-stemmed shrub that reaches a height and width of 8 to 12 feet tall without support. A one foot tall specimen that is planted in the spring can be expected to reach 5 feet or more by the following winter. It can grow to 15 feet tall or more if given support on a trellis or other structure. Its evergreen leaves are covered with red tomentum (hairs) when young and are speckled with red or purple at maturity. The petiole and young stems also appear red. These attractive leaves are commonly arranged in whorls of 3. Bright orange-red flowers appear in forking cymes at the tips of the branches throughout the year. The slender flowers are tubular and reach a length of 1 to 1 ½ inches. Although tolerant of shade, flowering is much reduced.

**General Information**

**Scientific name:** *Hamelia patens*  
**Pronunciation:** huh-MEE-lee-uh PAY-tenz  
**Common name(s):** firebush, scarlet bush  
**Family:** Rubiaceae  
**Plant type:** shrub  
**USDA hardiness zones:** 9 through 11 (Fig. 2)  
**Planting month for zone 9:** Apr; May; Jun; Jul; Aug; Sep  
**Planting month for zone 10 and 11:** Feb; Mar; Apr; May; Jun; Jul; Aug; Sep; Oct; Nov; Dec  
**Origin:** native to Florida  

**Uses:** specimen; accent; screen; border; mass planting; attracts butterflies; attracts hummingbirds

**Description**

**Height:** 6 to 12 feet  
**Spread:** 5 to 8 feet  
**Plant habit:** spreading  
**Plant density:** dense  
**Growth rate:** fast  
**Texture:** medium

**Foliage**

**Leaf arrangement:** whorled

Place, dean for UF/IFAS Extension.
Leaf type: simple
Leaf margin: undulate
Leaf shape: ovate
Leaf venation: brachidodrome; pinnate
Leaf type and persistence: evergreen
Leaf blade length: 4 to 8 inches
Leaf color: green
Fall color: red
Fall characteristic: showy

**Fruit**
Fruit shape: oval
Fruit length: less than .5 inch
Fruit cover: fleshy
Fruit color: black
Fruit characteristic: suited for human consumption; attracts birds

**Trunk and Branches**
Trunk/bark/branches: typically multi-trunked or clumping stems; not particularly showy
Current year stem/twig color: reddish
Current year stem/twig thickness: medium

**Culture**
Light requirement: plant grows in part shade/part sun; plant grows in the shade
Soil tolerances: occasionally wet; acidic; alkaline; sand; loam; clay
Drought tolerance: moderate
Soil salt tolerances: poor
Plant spacing: 36 to 60 inches

**Other**
Roots: usually not a problem
Winter interest: plant has winter interest due to unusual form, nice persistent fruits, showy winter trunk, or winter flowers
Outstanding plant: plant has outstanding ornamental features and could be planted more
Invasive potential: not known to be invasive
Pest resistance: no serious pests are normally seen on the plant

**Use and Management**
Hummingbirds and butterflies enjoy the nectar in the flowers. The small, black, glossy fruits are rounded and can be eaten. There is a continuous crop of these seedy fruits and birds are quite fond of them. The sap has been used to treat skin rashes. The firebush can be used as a foundation plant for large buildings and is superb when placed in the background of a mass of shrubs in a border. It is excellent in a mass planting and functions well as a screen or border. A hedge of firebush will need regular clipping. Flowers are often removed during this process.

*Hamelia patens* can be found growing naturally in a variety of situations in Florida from Sumter County southward. However, it grows best when well supplied with moisture.
and prefers a full sun to partial shade location in the landscape. This plant can take heat and drought, but a strong wind can cause some leaf browning. Though native, it is quite tender and can be killed to the ground during a freeze. Regrowth from the roots is rapid and rampant, and it has proven to be root hardy through zone 9. It functions very well as an annual in more northerly zones. The firebush is known to be tolerant of the lime bearing (high soil pH) soils of southern Florida. Fertilize this plant sparingly to bring out its best characteristics, and do not allow lawn grasses to invade its root zone.

Propagate Hamelia patens by seed (which must be fresh), cuttings, or air-layers.

**Pest and Diseases**
Occasional attacks of scales or mites may require control measures. New growth may be attacked by aphids in early spring, but natural predators often rapidly check the invasion. In south Florida, larvae of a moth species sometimes partially defoliates the stems, but they are easily controlled if you wish.
