**Phoenix reclinata: Senegal Date Palm**

Edward F. Gilman and Dennis G. Watson

Introduction

This striking palm creates an interesting silhouette with its multiple, gracefully curved, often reclining, slender brown trunks, and dense crowns of stiff but feathery leaf fronds. Old frond bases are medium brown and remain on the trunk forming a showy trunk which is attractive all year long. A mature specimen of Senegal Date Palm can reach 35 feet in height with a 12 to 20-foot-spread and creates a striking tree which casts a light shade. The palm is elegant when lit from below at night. It is best used as an accent for large landscapes and parks. The somewhat showy flower stalks, often lost within the thick foliage, are followed by one-inch-long, bright orange dates which are incredibly showy. These can be very attractive, particularly when viewed from a balcony above the tree.

General Information

- **Scientific name:** Phoenix reclinata
- **Pronunciation:** FEE-nicks reck-lih-NAY-tuh
- **Common name(s):** Senegal Date Palm
- **Family:** Arecaceae
- **USDA hardiness zones:** 9B through 11 (Figure 2)
- **Origin:** not native to North America
- **Invasive potential:** According to the IFAS Assessment of Non-Native Plants in Florida's Natural Areas (IFAS Invasive Plant Working Group 2008), *Phoenix reclinata* is invasive and not recommended in the central and south zone in Florida (to see if any exceptions for specified and limited use have been approved since publication, check the Conclusions Table at: http://plants.ifas.ufl.edu/assessment/conclusions.html). It is not considered a problem species and may be recommended in the north zone in Florida (counties listed by zone at: http://plants.ifas.ufl.edu/assessment/pdfs/assess_counties.pdf)
- **Uses:** specimen; container or planter
- **Availability:** not native to North America

The Institute of Food and Agricultural Sciences (IFAS) is an Equal Opportunity Institution authorized to provide research, educational information and other services only to individuals and institutions that function with non-discrimination with respect to race, creed, color, religion, age, disability, sex, sexual orientation, marital status, national origin, political opinions or affiliations. For more information on obtaining other UF/IFAS Extension publications, contact your county's UF/IFAS Extension office. Place, dean for UF/IFAS Extension.
**Description**

Height: 25 to 35 feet  
Spread: 12 to 20 feet  
Crown uniformity: irregular  
Crown shape: palm, upright/erect  
Crown density: open  
Growth rate: moderate  
Texture: medium

**Foliage**

Leaf arrangement: alternate (Figure 3)  
Leaf type: odd-pinnately compound  
Leaf margin: entire  
Leaf shape: linear  
Leaf venation: parallel  
Leaf type and persistence: evergreen  
Leaf blade length: 12 to 18 inches  
Leaf color: green  
Fall color: no color change  
Fall characteristic: not showy

**Flower**

Flower color: white/cream/gray  
Flower characteristics: showy

**Fruit**

Fruit shape: round  
Fruit length: .5 to 1 inch  
Fruit covering: fleshy  
Fruit color: orange  
Fruit characteristics: does not attract wildlife; showy; fruit/leaves not a litter problem

**Trunk and Branches**

Trunk/bark/branches: branches don't droop; showy; typically multi-trunked; thorns  
Pruning requirement: needed for strong structure  
Breakage: resistant  
Current year twig color: not applicable  
Current year twig thickness:  
Wood specific gravity: unknown

**Culture**

Light requirement: full sun, partial sun or partial shade  
Soil tolerances: clay; sand; loam; alkaline; acidic; well-drained  
Drought tolerance: moderate  
Aerosol salt tolerance: moderate

**Other**

Roots: not a problem  
Winter interest: no  
Outstanding tree: yes  
Ozone sensitivity: unknown  
Verticillium wilt susceptibility: resistant  
Pest resistance: sensitive to pests/diseases

**Use and Management**

The multiple trunks lose older fronds as the palm grows, clearing lower trunks of all foliage. This characteristic makes Senegal Date Palm a wonderful tree for accenting in a bed of groundcover or a grouping of low shrubs. Trunks which bend to the horizontal as the palm ages may need to be supported with a brace or cable to hold them up.

Growing easily in full sun or partial shade, Senegal Date Palm will thrive on any well-drained soil. Plants should receive adequate moisture during periods of drought. This palm is too large for all but the largest residential landscapes. They are very costly to purchase due to the slow growth rate. Large specimens command a high price.
Propagation is by seed or division of the many suckers which appear at the base of old clumps.

**Pests**
A variety of scales infest this palm.

**Diseases**
Some diseases of this tree are lethal yellowing disease, leaf spot.

Stressed and damaged trees often are infected with the Ganoderma fungus. A conk is formed at the base of the tree which appears as a varnished shelf or mushroom. Remove the conk and the tree to help control the spread of the disease to other plants. Prevent injury to the trunk and roots, and plant in well-drained soil. Be sure sprinklers do not irrigate the trunk so it remains wet. A wet trunk and wet soil encourage this disease. There is no control for butt rot, only prevention.
