**Vitex agnus-castus ‘Silver Spire’: ‘Silver Spire’ Chastetree**

Edward F. Gilman and Dennis G. Watson

---

**Introduction**

Chastetree can be grown as a large, deciduous, multi-stemmed shrub or small, 10 to 15 feet tall tree, and is noteworthy for its showy, summer display (late springtime in the deep South) of fragrant, upwardly-pointing, terminal panicles of white blooms which are quite attractive to butterflies and bees. The tree is often planted where honey is marketed to promote excellent honey production. The trunk is gray and blocky and somewhat ornamental. The sage-scented leaves of Chastetree are shaped liked a hand, or palmate, and were once believed to have sedative effects. Vitex has the common name “Chastetree” since Athenian women used the leaves in their beds to keep themselves chaste during the feasts of Ceres. Vitex seeds itself into landscaped beds and can become somewhat weedy.

---

**General Information**

- **Scientific name:** *Vitex agnus-castus*
- **Pronunciation:** VYE-tecks AG-nus-KASE-tus
- **Common name(s):** ‘Silver Spire’ Chastetree, ‘Silver Spire’ Vitex
- **Family:** Verbenaceae
- **USDA hardiness zones:** 6B through 11 (Fig. 2)
- **Origin:** not native to North America
- **Invasive potential:** invasive non-native
- **Uses:** specimen; container or planter; trained as a standard; deck or patio; highway median
- **Availability:** somewhat available, may have to go out of the region to find the tree

Place, dean for UF/IFAS Extension.
**Description**

Height: 10 to 15 feet  
Spread: 15 to 20 feet  
Crown uniformity: irregular  
Crown shape: vase, round  
Crown density: moderate  
Growth rate: fast  
Texture: fine

**Foliage**

Leaf arrangement: opposite/subopposite (Fig. 3)  
Leaf type: palmately compound  
Leaf margin: entire  
Leaf shape: lanceolate  
Leaf venation: pinnate  
Leaf type and persistence: deciduous, fragrant  
Leaf blade length: 2 to 4 inches, 4 to 8 inches  
Leaf color: green, blue or blue-green  
Fall color: no color change  
Fall characteristic: not showy

**Flower**

Flower color: white/cream/gray  
Flower characteristics: showy

**Fruit**

Fruit shape: unknown  
Fruit length: unknown  
Fruit covering: fleshy  
Fruit color: black  
Fruit characteristics: does not attract wildlife; not showy; fruit/leaves not a litter problem

**Trunk and Branches**

Trunk/bark/branches: branches droop; showy; typically multi-trunked; thorns  
Pruning requirement: needed for strong structure  
Breakage: resistant  
Current year twig color: green  
Current year twig thickness: thin, medium

**Culture**

Light requirement: full sun, partial sun or partial shade  
Soil tolerances: clay; sand; loam; acidic; alkaline; well-drained  
Drought tolerance: high  
Aerosol salt tolerance: moderate

**Other**

Roots: not a problem  
Winter interest: no  
Outstanding tree: yes  
Ozone sensitivity: unknown  
Verticillium wilt susceptibility: unknown  
Pest resistance: resistant to pests/diseases

**Use and Management**

Chastetree is used effectively in the mixed shrubbery border or as a specimen. It is usually seen as a shrub with a multiple trunk but can be trained in the nursery into a tree with one or several trunks if so desired. Occasionally used as a street or median tree since it will not grow up and into powerlines, but branches tend to droop toward the ground and would hinder traffic visibility if planted too close to the street. Median planting would be fine if there is adequate horizontal space for the crown to develop and spread. Since the flowers attract bees, locate it accordingly.

Chastetree prefers a loose, well-drained soil that is moist or on the dry side, not wet, but will tolerate drained clay or sandy soils. The tree often suffers from dieback in organic, mucky, or other soil which is kept too moist, such as in the New Orleans or Dallas areas. Chastetree should be planted in full sun or light shade, and will tolerate hot weather extremely well, moderate salt air exposure and alkaline soil.

In the colder regions (USDA hardiness zones 6b and 7), Chastetree can be killed to the ground by severe winters and is more often seen as a multistemmed shrub. Chastetree is a fast-grower and can easily recover its size when cold weather prunes it. Very similar to *Vitex negundo*, which also is called Chastetree, *Vitex agnus-castus* is not as cold hardy as *Vitex negundo* (grows in USDA hardiness zone 6a). *Vitex agnus-castus* may survive in USDA hardiness zone 6a if protected from winter winds.

Several other cultivars are available which offer flower color variety. ‘Alba’ has white flowers, and ‘Rosea’ has pink flowers.
Propagate by softwood cuttings in early summer or by seeds.

**Pests**
No pests are of major concern.

**Diseases**
Leaf spot can almost defoliate the tree. Root rot can cause decline in soils which are kept too moist.
