2009 Handbook of Employment Regulations Affecting Florida Farm Employers and Workers: Occupational Safety and Health Act (OSHA) [Federal]¹

Fritz Roka, Michael Olexa, Katherine Smallwood, Leo Polopolus, and Carol Fountain²

Purpose

Provides general safety standards, inspection, and posting requirements for covered employers and their workers.

Who Must Comply

Employers engaged in businesses involved in interstate commerce are subject to the regulations of the Occupational Safety and Health Act (OSHA).

Exemptions

Exempted from OSHA regulations are the following:

• Family farm operators who employ only immediate family members.
• Agricultural employers who employed ten or fewer employees (full-time or part-time) at all times during the previous twelve months and do not maintain a migrant labor camp.

Note: Exemption means exempt from audits and inspections. It does not mean that the hazards and liability have been removed or eliminated.

Definitions

A farming operation is defined as any operation where a farmer grows or harvests crops, raises livestock or poultry, or is engaged in related

This document is designed to provide accurate, current, and authoritative information on the subject. However, since the laws, administrative rulings, and court decisions on which it is based are subject to constant revision, portions of this publication could become outdated at any time. This publication is distributed with the understanding that the authors are not engaged in rendering legal or other professional advice, and the information contained herein should not be regarded as a substitute for professional advice. For these reasons, the utilization of these materials by any person constitutes an agreement to hold harmless the authors, the Institute of Food and Agricultural Sciences, and the University of Florida for any liability claims, damages, or expenses that may be incurred by any person as a result of reference to or reliance on the information contained in this publication.
activities. Farming operations include farms, ranches, orchards, dairy farms, or similar establishments. Production of ornamental plants and other nursery products is considered a farming operation.

**Requirements for Employers of Eleven or More Workers**

- Inform employees of your safety regulations.
- Post OSHA's Job Safety and Health poster in a permanent place where notices to employees are customarily posted.
- Report within eight hours to the nearest OSHA area office (by telephone or in writing) any fatal accident involving an employee or any other accident resulting in the hospitalization of three or more employees.
- Maintain up-to-date (within six working days) records of all occupational injuries and illnesses.
- Post the annual summary of your OSHA No. 200 log on February 1st of the following year. This posting must be maintained for the entire month of February in a conspicuous place.
- Retain all records of occupational injuries and illnesses for five years after the end of the year.
- Furnish a place of employment free from recognized hazards that could cause death or serious physical harm to employees. (This requirement enables an OSHA inspector to cite an employer who should have recognized a serious hazard, even if OSHA does not have a specific standard related to that hazard.)

**OSHA's Agricultural Standards**

OSHA has the following standards that apply specifically to agriculture:

- Storage and handling of anhydrous ammonia.
- Temporary labor camps.
- Pulpwood logging.
- Slow-moving vehicle emblems, signs, and tags.
- Rollover protective structures.
- Guarding of farm field equipment, farmstead equipment, and cotton gins.
- Field sanitation (enforced by the Wage and Hour Division).

Included in these standards are very specific training requirements. For example, the Hazard Communication Standard requires employers using hazardous chemicals to instruct employees on their safe handling (see EDIS document FE409, *OSHA Hazard Communication Standard [Federal]*).

**Employee Requirements**

Each employee must comply with all safety and health regulations that are applicable to his or her own actions and conduct. He or she must obey all rules, regulations, and safety procedures required by his or her employer to comply with the law, including participation in safety training and certifying that he or she has received such training. The employee is not subject to fines for noncompliance as is his or her employer; however, repeated failure to observe recommended safety procedures or use provided safety equipment is grounds for dismissal when properly documented.

**Inspections**

There are four categories of OSHA inspections. They are:

1. Imminent danger.
2. Fatality/catastrophic investigations.
3. Complaints/referrals.
4. Programmed.

The first three categories are considered unprogrammed inspections conducted in response to specific evidence of hazardous conditions at a workplace. Programmed inspections can be health and/or safety inspections and are normally comprehensive in scope.

OSHA is authorized to conduct workplace inspections without advance notice. Inspectors (also
called compliance officers) are authorized to enter workplaces without delay and at reasonable times. If an employer refuses admission to his or her property, OSHA must obtain a warrant.

Note: Always insist on seeing an OSHA compliance officer’s credentials. Also, be aware that an OSHA inspector has the right to interview employees during work hours.

**Enforcement**

Penalties for OSHA violations can be very costly. OSHA classifies violations by their nature: willful, repeated, serious, other-than-serious, and failure to abate/correct.

Civil penalties include:

1. **Willful and repeated** violations: a minimum fine of $5,000 per violation and up to a maximum of $70,000.

2. **Serious** violation: a mandatory fine of up to $7,000. A serious violation occurs when there is a substantial probability of death or physical injury in the workplace and the employer has not exercised reasonable diligence to inform employees and mitigate the risk(s).

3. **Other-than-serious** violations: fines between $0 and $7,000 per violation.

4. Failure to abate/correct a violation: fine up to $70,000 per day for every day after the permitted correction period has expired.

5. Failure to publically post OSHA requirements: up to $7,000 per violation.

Amount of civil penalties can take into account the good faith of the employer, previous history, size of the business, and gravity of the violation.

Criminal penalties can arise from a death of an employee or obstruction of an OSHA investigation.

2. For a second offense when a willful violation results in an employee death, up to $20,000 or up to 12-months imprisonment, or both.

3. Any one giving false statements pursuant to an OSHA inspection could face up to $10,000 in fines, up to 6-months imprisonment, or both.

4. A person giving advanced notice of an OSHA inspection will face criminal penalties of up to $1,000 in fines, up to 6-months imprisonment, or both.

**Job and Workplace Safety Information**

Florida is one of twenty-four states that do not have an approved OSHA state plan. Instead, the state of Florida has formed an alliance with OSHA through the Safety Florida Consultation Program at the University of South Florida in Tampa.
